

QMI MPS-5000 COLD MICROPERFORATION SYSTEM

The QMI MPS-5000 is a reliable and economical machine that allows continuous perforation of .025” diameter through .100” diameter holes across the entire moving web or only in required areas of the web.

KEY FEATURES INCLUDE:

- Interchangeable pin sleeves over a carrier roll.
- Brush backup roll supports the web and allows pins to penetrate.
- Movement of the web across the pins provides rotation to the unit.
- Perforate only specific strips of the web by using pinned and blank sleeves.
- Perforate different patterns or hole sizes in areas of the web.
- Square, diamond, offset and custom patterns are available.
- Capable of perforating small and closely spaced holes.
- Clamshell style enclosure opens and closes pneumatically, and provides full safety guarding.
- In or out-of-line operation.
- Mount horizontally, vertically or upside down.
- Can be placed in a wide variety of locations because of its small cross section.
- Can be converted to produce slit perforations.

In line with our policy of continual research and development, we reserve the right to alter machine specifications without notice. Copyright ©QMI, Inc. All rights reserved
